

Thomas Armenta

Field Superintendent, Northern Plant Services, Ltd.

Tom Armenta brings over four decades of industrial service expertise to his role as Field Superintendent at Northern Plant Services, Ltd. His extensive career spans hazardous waste remediation, catalyst handling, ultra-high-pressure water blasting, emergency spill response, and confined space entry across refineries, steel mills, chemical plants, and railways throughout North America.

As Project Manager at Reactor Services International, Tom led pyrophoric catalyst changeouts and inert confined space vessel work for top refineries across the U.S., managing large shutdown crews and complex turnaround schedules. His deep knowledge of catalyst removal, replacement, and vessel reassembly continues to inform best practices in refinery service work today.

Tom has held senior leadership roles with companies such as Heritage Environmental and Tradebe Environmental Services, managing large-scale environmental cleanup projects—including train derailments, refinery shutdowns, and hazardous site demolitions—while supervising crews, overseeing safety, and handling multimillion-dollar operations.

Known for his technical proficiency, Tom is certified in confined space rescue, chemical safety, railcar response, and holds numerous OSHA and DOT credentials. His hands-on leadership and deep industry knowledge continue to drive safe, efficient, and compliant field operations across the Midwest.
